

## **Heat Pump and AC, Install & Service**

**Description:** This 3-day course gives newer technicians the best practices for installation on residential HVAC units, including how to do a proper install and fire off. There will be a mix of classroom and hands-on training so that students can practice what they are learning.

**Level of Student:** New hires, Beginner to Intermediate Installation Technicians

**Tuition:** Includes registration, course materials, and lunch.

### **Objectives:**

- Understanding proper gas furnace installation procedures
- Understanding impediments to airflow
- Understanding electrical hookups
- Understanding proper safe brazing techniques
- Understanding heat pump and air conditioning charging
- Understanding consumer relations
- Understanding the importance of time management
- Understanding indoor air quality products

### **Course Content:**

- Segment 1: Before the Install
- Segment 2: Troubleshooting
- Segment 3: AC & HP Charging
- Segment 4: After the Install
